NO.3 An IBM Tivoli Storage Manager administrator is running short of scratch volumes and has the reclamation threshold set at 100. He has also discovered that he has more than 30 volumes that have more than 85% reclaimable space. The administrator should adjust the reclamation threshold to which value to reclaim those 30 volumes?

- A. 1
- B. 15
- C. 75
- D. 85

Answer: D

NO.4 What are two characteristics of Microsoft Windows Volume Shadow Service (VSS) fast restores using Data Protection for Microsoft Exchange Server?

- A. Restore granularity is at the mailbox level.
- B. Only full and incremental backup types can be restored.
- C. It supports restoring a VSS backup to an alternate database.
- D. Any backup to LOCAL can be restored only to the same system.
- E. It does not support restoring a VSS backup to an alternate database.

Answer: C,D

NO.5 Which two statements are true for the group backup?

- A. It cannot be added to a backup set.
- B. It performs a full or differential backup.
- C. All objects in the group are expired together.
- D. It uses different management classes for the objects.
- E. Existing exclude statements for any files in the group are honored.

Answer: B,C

NO.6 Which two components of the IBM Tivoli Storage Manager V7.1 server must be considered and adjusted during installation if simultaneous write to copy pools will be used?

- A. the active log
- B. the archive log
- C. the db2diag log
- D. the DB2 database
- E. the failover archive log

Answer: A,B

NO.7 What are three ways to check for client backup failures?

- A. db2diag.log
- B. clsmerror.log
- C. dsmsched.log
- D. OS security log
- E. TCP/IP communication log
- F. Tivoli Storage Manager server activity log

Answer: A,B,F

NO.8 Where does deduplication processing take place with client-side deduplication enabled on the Tivoli Storage Manager server?

- A. on the server only
- B. on the Backup-Archive client only
- C. on both the Backup-Archive client and the server
- D. on the server but the client maintains the deduplication list

Answer: C

http://pic.dhe.ibm.com/infocenter/tsminfo/v7r1/index.jsp?topic=%2Fcom.ibm.itsm.srv.doc%2Fdup_client_ovw.html

NO.9 Which scheduling mode provides the IBM Tivoli Storage Manager administrator with the most control over backup scheduling?

- A. client polling
- B. server prompted
- C. session initiation
- D. enhanced schedules

Answer: A

NO.10 Which three steps must be completed so SERVER-A and SERVER-B can use SSL to communicate?

- A. Each server must specify COMMMETHOD SSL in its options file.
- B. Each server must be defined to the other specifying the SSL=YES parameter.
- C. Both servers must be restarted after configuring the appropriate SSL parameters.
- D. Each server's password must be replaced just prior to defining them to each other.
- E. The partner certificate of SERVER-B must be manually imported on SERVER-A and that of SERVER_A on SERVER-B.
- F. The administrative ID used to perform the DEFINE SERVER commands must have the same PASSEXP attribute value on both servers.

Answer: A,C,D

NO.11 What is the order to build a script to control server maintenance tasks?

- A. back up stgpool stgpool migration stgpool reclamation identify duplicates expiration database backup
- B. database backup back up stgpool identify duplicates stgpool reclamation stgpool migration expiration
- C. back up stgpool identify duplicates database backup expiration stgpool reclamation stgpool migration stgpool reclamation stgpool migration
- D. expiration database backup back up stgpool stgpool migration stgpool reclamation identify duplicates expiration

Answer: B

NO.12 What is the default setting for collocation when a primary sequential access storage pool is defined?

- A. collocation no
- B. collocation yes
- C. collocation group
- D. collocation filesystem

Answer: C
